

## APPLICATION AND USE

2F/3F valve bodies are used in HVAC systems to control and regulate fluids. Valves are female threaded for connections. 3 -way valves are used as mixing. They can also be used as diverting by reducing the max differential pressure value by $50 \%$. Do not use the bypass (angle way) as control port.

## ACTUATORS

2F/2F valve bodies are motorized by DA-51, DA-71, DA-72 series electric actuators.

## WORKING

Stem up: $\quad$ direct way $A-A B$ closed (B-AB way open for 3-way valve)
Stem down: direct way $A-A B$ open (B-AB way closed for 3-way valve)

| TYPE |  | DN | $\begin{aligned} & \text { KVs } \\ & \mathrm{m}^{3} / \mathrm{h} \end{aligned}$ | STROKE mm | MAX DIFF. PRESS. (*) bar |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2-WAY | 3-WAY |  |  |  | DA-51 | DA-71 | DA-72 |
| 2F-65 | 3F-65 | 65 | 63 | 21 | 2 (2) |  |  |
| 2F-80 | 3F-80 | 80 | 100 | 41 |  | 2 (6) | 2 (10) |
| 2F-100 | 3F-100 | 100 | 145 | 41 |  | 2 (4) | 2 (6) |
| 2F-125 | 3F-125 | 125 | 220 | 41 |  | 2 (3) | 2 (4) |
| 2F-150 | 3F-150 | 150 | 320 | 41 |  | 2 (2) | 2 (3) |
| 2F-200 | 3F-200 | 200 | 550 | 42 |  | 2 (1) | 2 (2) |

(*) the values in the brackets are the max diff. pressure when valve is fully closed and actuator is still able to open or close the valve with security. the values outside the brackets are the suggested max pressure drop (valve fully open)

## TECHNICAL FEATURES

| Nominal pressure: | PN16 (ISO7268/EN1333) | Control flow |  |
| :---: | :---: | :---: | :---: |

## INSTALLATION

## PIPING CONNECTIONS

Make the piping connections according to flow directions indicated on valve body as the following drawings.
$A B$ is always the output. Input is $A$ for 2-way valve, $A$ and $B$ for 3 -way valve.

VALVE MOUNTING
Before mounting the valve body be sure that the pipes are clean and free of soldering scraps. Pipes must be lined up squarely with the valve at each connection and free of vibrations. Install the valve/ actuator in the vertical or horizontal position, never at upside down. Leave sufficient clearance to facilitate the dismantling of actuator
from the valve body for maintenance purpose. The valve must not be installed in an explosive atmosphere or in places in which temperature and humidity are outside ranges indicated on the technical futures part. Valve must not be subjected to steam or water jets or dripping liquid. 3 -way valve must be used as mixing valve (2 inlets 1 output). If the valve is used in diverting way ( 1 inlet 2 outputs), the max differential pressure indicated in the data sheet must be reduced by $50 \%$.
