

SCR100

Carbon dioxide Transmitter 0–10 V and
Temperature Sensor NTC 1.8/10 kohm

D-70-22

10 Mar 2005

SCR100 is an infrared and maintenance-free carbon dioxide transmitter for installation on indoor walls.

SCR100 measures the carbon dioxide concentration in the ambient air, up to 2 000 ppm, and transforms the data into a 0-10 V or 0 - 5 V output signal.

SCR100 is also equipped with passive temperature elements selectable 1.8 kohm for TAC Vista® products, 10 kohm for I/NET® products and 10 kohm for Continuum® products.

SCR100 helps you save money by decreasing the energy consumption, while creating a healthier indoor climate.

FUNCTION

The SCR100 sensor measures the carbon dioxide concentration and the temperature.

The CO₂ output signal can be either 0 – 10 V or 0 – 5 V, selected by wiring.

The temperature signal can be selected for any of

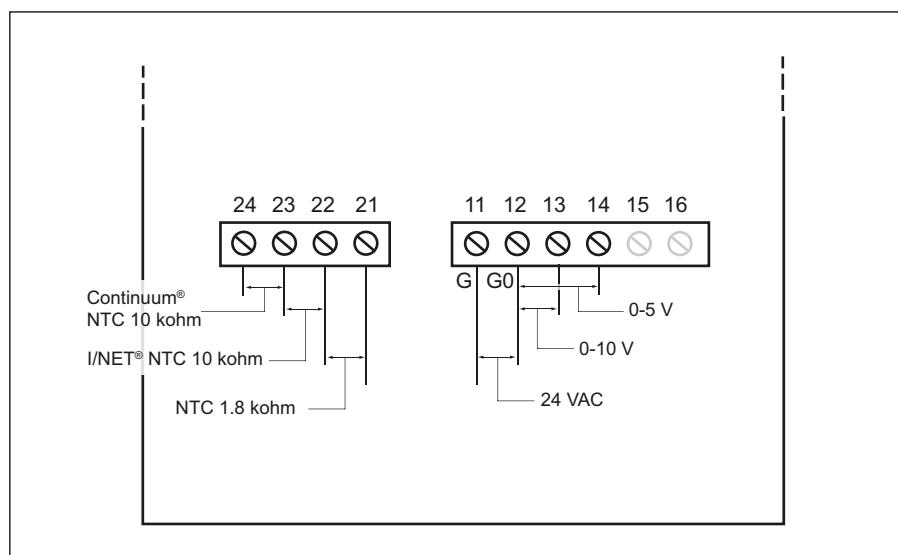

- TAC Vista® products, NTC 1.8 kohm
- I/NET® products, NTC 10 kohm
- Continuum® products, NTC 10 kohm

Please refer to Wiring below.

INSTALLATION

Make sure there is no air leakage from the conduit.
